## **Analog Electronics Questions And Answers**

Eventually, you will certainly discover a supplementary experience and achievement by spending more cash. nevertheless when? reach you acknowledge that you require to acquire those every needs past having significantly cash? Why don't you attempt to acquire something basic in the beginning? That's something that will lead you to comprehend even more a propos the globe, experience, some places, taking into consideration history, amusement, and a lot more?

It is your unconditionally own epoch to act out reviewing habit. in the midst of guides you could enjoy now is **analog**

turn-on B. fast turn-off C. large collector-base reverse bias D. large emitter-base forward bias. 2. MOSFET can be used as a A. current controlled capacitor B. voltage controlled capacitor C. current controlled inductor D. voltage controlled inductors. 3.

### **300+ TOP ANALOG ELECTRONICS Questions and Answers pdf MCQs**

Answer: Constant current bias circuit supplies constant emitter current. It also provides very high source resistance since the AC equivalent of the DC current source is ideally an open circuit. Q.15. What is the use of level translators? Answer: Because of direct coupling, dc level at the emitters rises from stage to stage. This increase dc level tends to shift the operating point of the succeeding stage and therefore limits the output

Answers voltage swing a may even distort the output signal.

## **Analog Circuits Interview Questions and Answers**

Answer: A linear integrated circuit is a solid state analog device characterized by a theoretically infinite number of possible operating states. It operates over a continuous range of input levels. Within a certain input range, the amplification curve of a linear IC is a straight line i.e. the input and output voltages are directly proportional.

Q4. Why most interrupts active Low?

Answer: The reason for most signals to be active low is as below: If you consider transistor as an example, active low means the capacitor in transistor output terminal will get charged or discharged based on signals from low to high or from high to low transitions respectively.
