European Business in Korea Business Confidence Survey 2015

This is a summary of economic reports compiled by our Agents during May 2019. It generally compares activity and prices over the past three months with a year ago. The information in this publication references the Agents' new aggregated scores as announced in March 2019.

Agents' summary of business conditions - 2019 Q1 | Bank of ...

Confidence Index rises to +1.3 (from -20.6 last quarter), at least partly due to the general election. Underlying economic fundamentals remain challenging. GDP may experience a small bounce in Q1, but growth is likely to remain subdued through 2020. Domestic sales and exports are slowing compared to previous years, and this is leading directly into a duller picture for profits growth.

Business Confidence Monitor: national | ICAEW

Leaseurope and Invigors EMEA have published the results from the most recent European Business Confidence Survey conducted in December 2016. The findings show a continuing positive sentiment towards the prospects for the European leasing business in the first half of 2017, despite the political upheavals and uncertainty of the past year.

Business Confidence Survey 2013 – rolandberger.com

Consumer Confidence in European Union is expected to be -17.00 points by the end of this quarter, according to Trading Economics global macro models and analysts expectations. Looking forward, we estimate Consumer Confidence in European Union to stand at -13.00 in 12 months time. In the long-term, the European Union Consumer Confidence is projected to trend around -10.00 points in 2021 and -8.00 points in 2022, according to our econometric models.

Business tendency surveys are carried out to obtain qualitative information for use in monitoring the current business situation and forecasting short-tem developments. This publication is a practical manual on the design and implementation of such surveys, as well as on how the results can be interpreted and used for economic analysis and forecasting. It includes a system of harmonised business tendency surveys, developed by the European Commission and the OECD Secretariat, to collect qualitative data from business managers in the manufacturing, construction, trade and service sectors.

The Handbook on Economic Tendency Surveys provides best practices and harmonized principles on how to conduct economic tendency survey from sample selection, questionnaire design, survey questions, survey execution, to data processing and dissemination. It also provides examples of uses of these surveys, for example, for composite tendency indicators. These surveys provide qualitative information that cannot be collected using other quantitative statistical methods. They also serve as an integral part of an early warning system because they provide information about the occurrence and timing of upturns and downturns of the economy.

When China's economic reforms were beginning, there was an expectation in the west that China's financial markets would be opened to western banks and that China's banks would be reformed along western lines. Joint ventures between Chinese banks and western banks, minority shareholding by western banks and the involvement of western banking personnel in assisting Chinese banks with their reforms were all seen as moves towards reform along western lines. This book analyses the role which western bankers have played in China's economic reforms, focusing on their influence on institutional change and corporate governance. Based on extensive original research, the book shows that while components of western models of corporate governance have been widely adopted, the motivation for these changes seems to have been legitimacy-seeking by Chinese banks, and that whilst there has been relatively rapid change in the formal legislative environment, informal organisational practices are changing at a much slower pace. Alliances between Chinese and western banks are woven with contradictions and power games and so many actors in the Chinese banking sector seek to resist manipulation by their western counterparts. The financial crisis weakened the idea that western banks are a universally correct model and strengthened China's resolve to keep control of its banking sector and manage it along Chinese lines.

Recoge: Summary and conclusions - 1.Experience with EU composite indicators - 2.Examination of EU indicators.

Leading, composite and sentiment indicators offer a powerful way of communication of statistical information and reaching out to users of statistics. The indicators can provide relevant and timely information on aspects of the economy and the social society that are not covered by other statistics. They can also provide information on complex phenomena in simple and condensed form, for instance on the current or expected economic development or on the well-being or sense of happiness of the citizens. These Guidelines provide guidance to statistical offices on their possible roles in developing and producing leading, composite and sentiment indicators and give practical and operational guidance to statistical offices that produce or consider producing these indicators. Existing examples of good practice are also referenced.

This is the United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2020 and 2021. Produced by the Department of Economic and Social Affairs, the five United Nations regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization and other intergovernmental agencies.

Drawing on OECD statistics in particular, 'Understanding Economic Statistics: an OECD perspective' shows readers how to use statistics to understand the world economy. It gives an overview of the history, key concepts and the main providers of economic statistics.
