What is the distinction between flexfields and application features? Flexfields, while they are a major feature of the Oracle E-Business Suite as a whole, are merely a mechanism to provide many application features. Key flexfields provide a flexible way for the Oracle E-Business Suite to represent objects such as accounting codes, part numbers, job descriptions, and more. For example, the Accounting Flexfield is a feature that uses a key flexfield to represent accounting codes throughout ...

Release 12: Descriptive Flexfields Get Groovy. Richard Bingham. Senior Development Manager. New in Release 12 is the inclusion of the Groovy expression platform into Descriptive Flexfield (DFF) setups. This applies across application products and is used in the default value property, and most significantly as custom validators on the flexfield. As illustrated by our overview articles, Descriptive Flexfields are defined under Setup and Maintenance, under task Manage Descriptive Flexfields.

The reference field could be a :BLOCK.FIELD (Oracle Forms only) or a profile option (\$PROFILE\$\$ reference). During runtime, the flexfields engine reads the value of the reference field and tries to use the same value for the DFF context value. This context value has to be available in the DFF metadata if synchronization has been enabled.
