Glass body fuses seem to have a DC voltage rating half that of a maximum AC voltage rating [in general]. While Ceramic cases appear to have the same maximum voltage rating regardless of the operating voltage, AC or DC. The Military standard for Fuses; MIL-PRF-23419 does not seem to differentiate between AC or DC voltages for low voltage fuses.

Fuses are used on power systems up to 115,000 volts AC. High-voltage fuses are used to protect instrument transformers used for electricity metering, or for small power transformers where the expense of a circuit breaker is not warranted. A circuit breaker at 115 kV may cost up to five times as much as a set of power fuses, so the resulting saving can be tens of thousands of dollars.
